Course Learning Outcomes:

provide seamless user experiences provide simpler solutions
measure product performance monitoring data pipeline
lead service model combines experienced project managers
achieve directly provided technical leadership
lead open source enterprise service bus
assign basic qualifications bachelor
spot potential failure cases experienced
increase demandsof ambulatory ehr solutions
join intuitive surgical means joining
develop connections utilizing ecae tools
evaluate new product concepts work
develop core optimization architecturework directly
visualize data technical lead
consult resources including accurate project
handle data pipeline engineering problems
write communication skills bonus points
identify specific application systems requirements
improve computer system validation processes
embed environment develop software
resolve production ecae environment incidents
organize user training including documentation
deliver high quality educational programs
deliver ground breaking ideas
associate systems . install
document code promoting modularity
outsource offerings essential functions
manage care business workflows
include scheduling like tidal
associate leading edge solutions
provide daily user support
solve skills excellent written
specify service level agreements
provide world class problems
base software storage products
resolve technical deployment obstacles
attract top talent building
provide equitable student learning
responsibilitiesmake data architecture decisions
take two startup teams

write ccl code based
test various product components
include servlets), javascript
teach assignment may
provide help desk support
work experience
optimize customer workloads
exist standard technologies
embed software platform
introduce pure1 meta
deploy plans
lead integration platform
break new ground
identify soft spots
embed linux devices
lead job scheduling
approve various documentation
exist ecae infrastructure
build data infrastructure
remediate complex issues
provide design solutions
write communication skills
distribute computing technology
select candidate may
deliver complete solutions
take daily responsibility
sell sirius offered
improve surgical efficacy
decrease surgical invasiveness
include current addresses
base issue escalations
please apply directly
embed host environment
resolve technology problems
resolve customer problems
embed firmware development
distribute algorithms collaborative
study system capabilities
form project team
integrate new technologies
show school name
print circuit boards
pioneer numerous advancements
establish personal networks
communicate technical information
write highly optimized
eliminate client uncertainty
make detailed plans
provide visa sponsorship
coordinate team environment
keep information confidential
talented qa engineer
standardize coding documentation
excite consumer application
attend educational workshops
operate systemso development
bring financial wellness
optimize software workloads

take unexpected directions
develop technology strategies
construct workflow charts
include inquiries pertaining
review professional publications
review programming assignments
structure troubleshooting techniques
deploy management software
share governance process
network technologytrack record
study current practices
debug problems within
identify project milestones
make available securely
accomplish related results
follow professional responsibilities
provide compliance leadership
mind practices within
consider complete applications
develop solutions
ongoing professional development
ensure efficient operation
write improved procedures
support teaching
vary student levels
develop innovative ways
use technology
mind hiring practices
demonstrate experience
protect veteran status
take us retention
analyze debug logs
solve problems
develop code
provide solutions
deliver enterprise
demonstrate ability
manage teams
base assessment
include oracle
define market
benchmarking state
image systems
distribute systems
learn),
lead teams
improve performance
add guidance
provide data
consult company
learn process
resolve problems
accredit college
require skills
experience background
drive decision
base management
test methodology

provide leadership
embed within
troubleshoot skills
exist application
exist systems
provide hands
write specifications
build relationships
include cisco
develop strategy
program skills
orient environment
operate systems
provide consultation
ensure documentation
debug applications
include icd
lead provider
share responsibility
provide management
orient design
provide value
pace team
work knowledge
image subsystems
orient person
resolve issues
call support
win one
include students
assign goals
grow environment
qualify candidates
staff solutions
program techniques
resolve problems
please apply
develop prototypes
provide real
obtain poly
distinguish engineer
accomplish career
share governance
emerge technologies
sustain engineering
thrive team
provide organizations
build consensus
educate customers
allow customers
summarize information
design modifications
face teams
talented recruiters
make recommendations

value member
grow professionally

Summary from top job descriptions:

Primary Function of Position:Intuitive Surgical is seeking a strong, experienced, collaborative QS CSV Lead to ensure that Intuitive Surgical computerized and automation systems are in full compliance with regulatory requirements, company policies, and procedures.

As a Senior Software Optimization Engineer at ARM focused on the Mobile Compute segment, you work in a team of open-source developers who share your passion and help ARM maintain its leadership in the low-power market.

You focus on Open Source support for the highest performance mobile platforms found in smartphones, tablets and laptops.On this team your work involves enabling and optimizing software workloads for client compute solutions from smartphones to laptops (Android, ChromeOS, Linux, Web browser, JIT compilers, technologies, etc..).

You work with some of the greatest household names in our industry to help develop, optimize, and deliver the software needed to support cutting-edge ARM IP.

With nearly 10 million customers, Financial Engines is the leading provider for retirement advice, building personalized financial plans powered by our software.

As a Software Engineer on the Site Reliability Engineering team, you will play a pivotal role in the reliability and availability of our applications that delivers mission-critical decisions on the investment advice for millions of Americans.

You will join a fast-paced team that works, to quickly assess and analyze within the specified service level agreements on any application based incidents.

Diagnose intricate software problems, provide solutions and workarounds to ensure the highest level of reliability and availability for critical applications.

Provide consultation and strategic recommendations to Product Development teams by quickly assessing and remediating complex issues.

This role will work closely with our art and design teams, responding to user feedback, to deliver tools that provide an efficient workflow and the best possible user experience.

Use Object-oriented design and programming skills to develop a tools framework on our next-gen cross-platform mobile game engine

Patient safety is our highest priority.Primary Function of Position:Work with an incredibly talented team to design and build the embedded software platform and feature set for next-generation surgical robotic systems.

The successful candidate must excel in a high-energy small team environment, be able to drive to solutions from rough requirements, and have a commitment to high product quality.

A strong sense of shared responsibility and shared reward is required.Roles and Responsibilities:• Work on a cross functional team to develop technical specifications and evaluate design trade-offs – specifically in the area of platform/infrastructure software• Design and development of product-focused, rock-solid, C++ software in a heterogeneous, multi-processor SoC/FPGA/real-time-embedded environment• Develop software for embedded Linux devices:o Customize and productize embedded Linux distributionso Create drivers that interface with custom FPGA deviceso Design and implement multi-threaded, distributed system C++ applications• Contribute broadly to many areas of software development, including but not limited to:o Extension of current frameworks to new processors and operating systemso Development of research prototypes used to evaluate new product concepts• Work with electrical engineers to bring up new, custom hardware

The Google Cloud Platform team helps customers transform and evolve their business through the use of Google's global network, web-scale data centers and software infrastructure.

As a Technical Solutions Engineer, you will combine software development, networking, and systems administration expertise with an aptitude for technical advising, troubleshooting and analysis.

You will work across multiple customer-facing teams to improve the product's vision and to make global businesses and organizations successful.

You are a technical solutions expert, helping Googlers and customers approach and resolve technology problems and design Google-scale services.

And our teams are dedicated to helping our customers — developers, small and large businesses, educational institutions and government agencies — see the benefits of our technology come to life.

Diagnose and resolve customer problems for Google Cloud Platform products; Engineer and implement new operations, productivity and investigation tools to increase efficiency for Technical Solutions Engineering.

Act as a consultant and subject matter expert for Product Managers, Software Engineering teams, Sales Engineers, Site Reliability Engineers, and Strategic Customer Engineers to resolve technical deployment obstacles and improve the product's vision.

Obtain and maintain an in-depth understanding of Google's product technology and underlying hardware and software architectures, to build in-product self-service solutions.

Work closely with multiple Product Management and Software Engineering teams on understanding ways to improve the product, and interact with our Site Reliability Engineering (SRE) teams to drive production excellence.

Be an advocate for our customers in representing their issues to Product Management and Software Engineering and develop innovative ways to resolve issues.

2 years of industry experience in technical support, professional services, engineering, sustaining engineering or systems engineering.

The successful candidate must excel in a high-energy, focused, small-team environment, be able to drive to solutions from rough requirements, and have a commitment to high product quality.

Roles and Responsibilities:• Deliver superb video quality to clinicians • Invent, evaluate and implement real-time image processing algorithms • Evaluate and review image sensors, illumination and display solutions • Optimize system (camera, lights and display) for excellent image quality • Invent, prototype and test advanced imaging modes • Obtain and iterate surgical feedback into designs • Prepare and review patent applications

The successful candidate must excel in a high-energy team environment, be able to drive to solutions from rough requirements, and have a commitment to high product quality.

Roles and Responsibilities: • Work on a cross-functional team to architect and implement new user interface features in a complex, distributed, hierarchical state machine • Collaborate with designers of robotic control algorithms to define the behaviors of the robotic system • Develop and maintain external interfaces between state machine and embedded host environment in C/C++ • Perform formal risk analysis and develop and verify software mitigations • Document according to Intuitive's development guidelines

We're seeking a Member of technical Staff engineer with a proven track record of building great online (web and mobile) products for the C2C Selling team.

This role requires partnership and collaboration with other organizations throughout eBay, so (s)he must have great communication skills and the ability to work well with others.

Excellent communication skills and ability to understand and provide good feedback on business requirements.

We are looking for a Chief Architect who will successfully design and implement ground breaking software defined storage solutions for tomorrow's enterprise and cloud environments.

This unique individual will have strong expertise and experience in bringing to market leading software products in enterprise, cloud,

or virtualization computing environments.

You will leverage your knowledge, experience, and creativity to build an enterprise storage software team, lead the design and development for a range of innovative cloud-based software storage products, and exercise a key leadership role in defining and driving the company's vision, from innovative architectural concepts into customer deployments.

You will work closely with DDN's design, product management, engineering, senior management and leadership teams to define, implement and deliver a best in class suite of software solutions for enterprise and cloud based applications.

Technical leadership for the definition, design and implementation of world class software suites and cloud services

Directly provided technical leadership and delivered enterprise-class storage, cloud computing, virtualization or containerization solutions

Recognition as leader with ability to build strong working relationships with cross-functional teams and stakeholders to ensure efficient operation and success.

As a valued member of the team at eBay that develops world-class behavior analytics product as well as generate insights through data science, you will make important contributions.

Design and build behavioral data insights platform, deliver analytics product, combine qualitative and quantitative data to convince people with your actionable insights thus improve the user experience, which is what you need to do.

• Work with product managers and business analysts to build new analysis tools and metrics for measuring product performance

As a leader, you will need to build a diverse and open culture that embraces debate, makes decisions and collectively work and deliver to our customers.

The Analytics team is responsible for reliably ingesting high volume streams of data from multiple systems, enriching that data, processing it, and providing real-time queries, visualizations, insights, alerts, and other useful products from it.

Geomagical Labs is an AI startup, developing an exciting consumer application, for millions of people.We are looking for a back-end engineer, with excellent systems software experience, to join our startup team and lead our back-end platform development.As platform infrastructure developer, you will work closely with Geomagical Labs' core team of technologists to design and develop our end-to-end cloud technology platform for our mass-scale consumer application.

The role includes development of data pipelines, application servers, networked services, databases, and APIs to provide real-time support for web clients, mobile clients, and algorithmic services.In addition to production apps and services, you will develop prototypes, algorithms, tools, benchmarks, data sets, and contribute to the design and construction of a continuous integration software development environment.Benefits Rare opportunity to join an early tech startup adventure when it is less than ten people, led by founders who've taken two startup teams through IPO.

Computer Science Instructor Salary: $65,624.42 - $87,916.71 annually Job Type: Full-Time Job Number: A18 - 03 Location: Both Liberal Arts Campus & Pacific Coast Campus, CA Department: Computer & Office Studies Closing: 1/29/2018 4:00 PM PacificDescription LONG BEACH CITY COLLEGE Long Beach City College is committed to providing equitable student learning and achievement, academic excellence, and workforce development by delivering high quality educational programs and support services to our diverse communities.

An ideal candidate will demonstrate cultural competency and enthusiasm in serving the diverse academic, socioeconomic, gender identity, sexual orientation, racial, and cultural backgrounds of community college student populations, including students with differing abilities (physical and/or learning) as these factors relate to the need for equity-minded practices within the classroom.

The primary teaching assignment involves teaching computer science courses with a focus on entry level programming in languages such as Java and C++, data structures and algorithms, computer architecture, and discrete structures in the Computer and Office Studies Department, as well as all students who are trying to satisfy general education requirement for Plan A, B, and C.

The ideal applicant for this position embraces the overall mission of Long Beach City college, with a clear, focused commitment to supporting teaching and academic excellence, and student learning and success through the work of Computer and Office Studies.

Qualifications MINIMUM QUALIFICATIONS Master's degree in Computer Science or Computer Engineering OR bachelor's degree in either of the above AND master's in mathematics, cybernetics, business administration, accounting or engineering OR , bachelor's degree in engineering AND master's in cybernetics, engineering, mathematics, or business administration OR bachelor's in mathematics AND master in cybernetics, engineering, mathematics, or business administration OR bachelor's degree in any of the above AND a master's degree in information science, computer information systems, or information systems OR , Meet equivalent qualifications established by the district AND Evidence of demonstrated cultural competency and enthusiasm in serving the diverse academic, socioeconomic, gender identity, sexual orientation, racial, and cultural backgrounds of community college student populations, including students with differing abilities (physical and/or learning), as these factors relate to the need for equity-minded practices within the classroom.

Industry experience in software engineering, programming, or web development.

Evidence of an ability to address and adapt to the instructional needs of varying student levels, using a variety of culturally relevant and responsive teaching strategies to encourage retention and student success in a wide range of Computer Science courses.

It is the District's policy to ensure that all qualified applicants for employment and employees have full and equal access to employment opportunities and are not subject to discrimination in any program or activity of the District on the basis of ethnic group identification, race, gender, color, language, accent, citizenship status, ancestry, national origin, age, sex, religion, sexual orientation, gender identity, parental status, marital status, veteran status, physical or mental disability or medical condition, or on the basis of these perceived characteristics.

This position is also responsible for identifying all business opportunities within the brand unit and partnering with client executives, engineers, other Sirius team members and alliance partners to deliver complete solutions, and satisfy client expectations. Primary Duties & Responsibilities• Applies expert knowledge of information technology and associated leading edge solutions and strategies related to the client's business to attain business unit, country/area or international objectives.

Develops accordingly a long-term business relationship with the client's executive management key decision-makers providing total solutions to the client business needs • Identifies opportunities and develops Sirius solution strategies, particularly managed service offerings.

Works with pre-sales architects and managers to ensure that appropriate quantity and quality of technical and services resources are deployed • Plans and conducts complex negotiations between Sirius and client and other party which results in appropriate and often long-term agreements and commitments • Anticipates future client problems in account planning, industry and information technology trends and develops realistic visions and strategies based on client strategic direction.

Leads by example and demonstrates the highest level of teamwork and professional qualities in all activities to enhance Sirius' position in the marketplace • Retains ultimate responsibility for high customer satisfaction.

• Forecasts tactical and strategic business opportunities • May perform other related duties as required and assigned Basic Qualifications• Bachelor's degree in Computer Science, Business Administration or related field • At least two (2) years experience leveraging partner resources throughout the sales cycle Other Position Requirements • Demonstrated skills in financial analysis and "cost of computing" calculation • Demonstrated ability to coordinate with our internal delivery teams to develop and architect a solution to meet the requirements of client's business/web based requirements • Demonstrated problem solving, customer service, negotiation, and follow-up skills• Demonstrated presentation and communication skills • At least three (3) years experience selling managed services or outsourcing offerings Essential Functions This position exists to sell Sirius offered IT solutions to customers and as such requires the ability to travel to and from customer sites and interact with customers on an ongoing and regular basis.

As a nationally recognized IT solutions provider with an over 35-year history of success, Sirius is known for cultivating the best talent, providing a positive work environment, and offering a compensation and benefits package designed to help our employees thrive both personally and professionally.

The Principal Architect independently provides specific systems consulting, systems analysis, resolves data integrity issues for technical infrastructures of all complexities and overall leadership related to the acquisition and use of complex enterprise computing systems throughout MHS entities.

This individual possesses and maintains expert-level knowledge and specialized experience in Ambulatory applications that support registration, scheduling, clinical documentation, billing, and provider/patient portal functions.

This level of expertise is centered on the organizations strategic vision to support the increasing demandsof Ambulatory EHR solutions for quality care improvements in our communities.

The Principal Architect advises and leads the translation of business requirements and models into feasible and acceptable data designs using healthcare standard technologies where applicable.

This role will have specific responsibility for Ambulatory applications, management of vital databases, development and maintenance needed to strategically design the technology solutions to support the MHS growth and health-care industry advancement.

The Principal Architect works under the direct supervision of the Director of Architecture and Security and Vice President of Information Services.Essential Job Outcomes:Lead the development and execution of Architecture, Engineering and Operational roadmaps for a portfolio of Ambulatory applications supporting enterprise initiatives and drive efforts to validate that strategic direction is aligned with business architecture/direction.

Develop strategy and technical direction for enterprise-class application solutions supporting key business requirements.

Evaluate new business needs by first analyzing suitability of existing standard technologies and applications, in order to support an overall application rationalization strategy for the enterprise.

Apply in-depth knowledge of systems and business to the development of technical design for large complex processes and projects.

Analyze, design, develop, test, troubleshoot, optimize, enhance and maintain Ambulatory applications; where applicable, oversee implementation of end-to-end integrated systems.

Work with Help Desk, Support Teams, and Network Operations staff as appropriate to determine and resolve problems received from clients.

Provide relevant statistical data required for MCMF Board Members and IS Executives to have visibility that drives key strategic decisions and enterprise accountability.

Work experience comprised of 7-10 years, specifically developing Ambulatory systems and architecture plans.
